

Evidence_01.pcap

After being released on bail, Ann Dercover disappears! Fortunately, investigators were careful monitoring her network activity before she skipped town. “We believe Ann may have communicated with her secret lover, Mr. X, before she left,” says the police chief. “The packet capture may contain clues to her whereabouts.”

You are the forensic investigator. Your mission is to figure out what Ann emailed, where she went, and recover evidence, including:

1. What is Ann’s email address?
2. What is Ann’s email password?
3. What is Ann’s secret lover’s email address?
4. What two items did Ann tell her secret lover to bring?
5. What is the NAME of the attachment Ann sent to her secret lover?
6. What is the MD5sum of the attachment Ann sent to her secret lover?
7. In what CITY and COUNTRY is their rendezvous point?

Evidence_02.pcap

You are investigating suspicious activity on a Windows machine suspected to be infected with malware. A PCAP file containing network traffic was captured during the suspected activity. The captured traffic reveals that the malware attempted to exfiltrate sensitive information through email.

1. Identify the first SMTP packet associated with the malicious email transmission and provide the date and time **in UTC**.
2. At which OSI layer does the malicious SMTP communication begin?
3. Determine the identity of the infected host, including:
 - (a) Internal IP address
 - (b) MAC address
 - (c) The host or computer name of the infected Windows
 - (d) System's RAM size
 - (e) Processor specifications
4. Describe the types of sensitive data that were exfiltrated.

Evidence_03.pcap

Anarchy-R-Us, Inc. suspects that one of their employees, Ann Dercover, is really a secret agent working for their competitor. Ann has access to the company’s prized asset, the secret recipe.

Security staff are worried that Ann may try to leak the company's secret recipe. Security staff have been monitoring Ann's activity for some time, but haven't found anything suspicious—until now. Today, an unexpected laptop briefly appeared on the company's wireless network. Staff hypothesize it may have been someone in the parking lot, because no strangers were seen in the building. Ann's computer (192.168.1.158) sent IMs over the wireless network to this computer. The rogue laptop disappeared shortly thereafter.

“We have a packet capture of the activity”, said security staff, “but we can't figure out what's going on. Can you help?”

You are the forensic investigator. Your mission is to figure out who Ann was IM-ing, what she sent, and recover evidence, including:

1. What is the name of Ann's IM buddy?
2. What was the first comment in the captured IM conversation?
3. What is the name of the file Ann transferred?
4. What is the magic number of the file you want to extract (first four bytes)?
5. What was the MD5sum of the file?
6. What is the secret recipe?
